Mark

This is to confirm TransMontaigne does not have Low Sulfur, max 1.0 per cent available at the current time and therefore cannot supply your Delphinus and CFS Paradero as requested. Our resupply was scheduled to arrive yesterday, April 8, 2014. The vsl is due in today. Once the vsl has arrived, I will confirm when the LS will be available. We anticipate the Pegasus J will be supplied on April 12, 2014 without any problem.
I will update you later today.

Our apologies for any and all inconveniences.

Best Regards
Keri Adams

Keri,
Please confirm our phone call that there is no 1% LS380 available for vessels Delphinus and Paradero. Your resupply is due in later today with a 36 hour discharge. Thanks.

Mark
